

"WE WANT YOUR STINKING BUSINESS"

QUALITY ODOR CONTROL & MANURE MANAGEMENT PRODUCTS
from
ROEBIC LABORATORIES, INC.

A major manufacturer of home and industrial wastewater products for over 40 years, ROEBIC has developed, tested, and proven an effective line of bacterial and enzyme products to liquefy solids and reduce odors associated with livestock manure economically.

ROEBIC MANURE LIQUEFIER is a mixture of nonpathogenic aerobic, anaerobic, and facultative bacteria that liquefy manure solids (feed & bedding too). An exceptional product for storage pits or lagoons.

ROEBIC MANURE DEODORIZER is a concentrated natural enzyme product combined with yucca extract that reduces odors and liquefies manure in storage pits and lagoons.

ROEBIC ODOR ELIMINATOR is a highly concentrated natural enzyme product that will eliminate natural odors in livestock confinement buildings and dairies. Can be used in "honey wagons" or sprayed on manure surfaces.

MANURE DEODORIZER and ODOR ELIMINATOR eliminate odors from ammonia, amine, mercaptan, and sulfides, work in a wide pH and temperature range, and are fragrance free. The enzymes are not affected by antibiotics, chlorine, disinfectants, or trace metals from feed additives. Also, 100% safe around humans, animals and in the environment.

For maximum effectiveness use these products in three successive stages over the lifetime of the manure, this constitutes the ROEBIC MANURE MANAGEMENT PROGRAM. They can be used individually for specific odor or liquidity problems.

ROEBIC products are available through major farm products dealers or directly from the factory.
